## The role of BlackBerry Secure in the MP 02

### Security Verification

The MP 02's software package has been security-audited by BlackBerry.

### Secure Manufacturing

BlackBerry provides constant monitoring of the factory where the MP 02 is made, with each device passing through a secure workstation that is remotely managed from Canada. BlackBerry's secure workstation injects a cryptographic security key on each device to establish a hardware root of trust.

# Secure Boot

When the MP 02 is booted up each hardware and software component is validated by BlackBerry technology, to ensure the device has not been tampered with. This ensures that only Punkt authorized software will run on the MP-02.

# BlackBerry Integrity Detection (BID)

In use, the MP 02 is continuously monitored for events or configuration changes that may indicate a compromise in security. The user is alerted if a threat is detected. In combination with the BlackBerry Secure manufacturing process and Secure Boot, BID continuously confirms that:

- a) The phone is a genuine Punkt. MP 02 device, running valid hardware and authorised software.
- b) There are no changes to the SW on the device that could compromise security.

# Secure Compound

A trusted execution environment guarantees the protection of sensitive data on the MP 02 such as cryptographic security keys.

# Why BlackBerry?

We recognise that security can't be added on, which is why we chose to partner with BlackBerry, where security is integral to everything they do. BlackBerry's approach to security is informed by 30 years of deep mobile security expertise and experience, continuous technical innovation and a point of view that recognises vulnerability wherever it lies.
